

a speaker;

a radio receiver having at least an active tuner and a scanning tuner;

means to input to the speaker the audio data output by the active tuner;

means to receive broadcasted recording identification information in the scanning tuner, the broadcasted recording identification information transmitted with individual recorded works and containing information associated with that particular recorded work;

means to compare the received broadcasted recording identification information with preselected recording identification information, the preselected recording identification information further comprising a list of one or more recorded works; and

means to tune the active tuner to the frequency used by the scanning tuner when the received broadcasted recording identification information, when compared with [and] the preselected recording identification information, indicates that a particular recorded work is being broadcast that is listed in the preselected recording identification information [match];

whereby the radio can be automatically switched to a station playing [a] an individual recorded work which has been identified as a desired recording.

CLEAN COPY OF AMENDED CLAIM:

16. A radio, further comprising:

a speaker;

a radio receiver having at least an active tuner and a scanning tuner;

means to input to the speaker the audio data output by the active tuner;

means to receive broadcasted recording identification information in the scanning tuner, the broadcasted recording identification information transmitted with individual recorded works and containing information associated with that particular recorded work;

a1 means to compare the received broadcasted recording identification information with preselected recording identification information, the preselected recording identification information further comprising a list of one or more recorded works; and

means to tune the active tuner to the frequency used by the scanning tuner when the received broadcasted recording identification information, when compared with the preselected recording identification information, indicates that a particular recorded work is being broadcast that is listed in the preselected recording identification information;

whereby the radio can be automatically switched to a station playing an individual recorded work which has been identified as a desired recording.
